

## GREAT FOR:

- Long-lasting foil embellishments
- High end fashion wear
- Fine details with foil

# CAD-CUT® HEAT PRESS ADHESIVE GET CREATIVE WITH ADHESIVE & FOIL

Heat transfer foils are known for being short-term embellishments when added to transfer papers and plastisol inks. CAD-CUT® Heat Press Adhesive solves the problem by permanently binding to the foil, giving foil-embellished designs a long life.

Standard Application

Multi-Color Effect

## 4 WAYS TO MAKE THE MOST OF CAD-CUT® ADHESIVE COMBINED WITH HEAT TRANSFER FOIL

- 1. Standard Application Method** – Cut your design from CAD-CUT® Heat Press Adhesive, heat apply and peel. Next lay foil smoothly over the adhesive and press for the recommended time, temperature, and pressure for a true mirror like finish.
- 2. Matte Finish** – A second application will give the foil a less mirror-like, more matte finish. After your initial application, let cool, peel the transfer foil away and place the garment under the heat press again using a cover sheet.
- 3. Distressed** – Crumple the foil and then heat apply. The result is a custom “crackle” finish that’s still shiny and reflective. The more crumpled you make the foil, the more distressed the look.
- 4. Multi-Color Effect** – Apply the distressed foil as usual. Once it’s cool, peel back the foil and apply a different color piece of smooth foil to fill in the voids.

## YOU DESIGN IT, WE CUT IT

Get your design cut with CAD-CUT Adhesive and ready to heat apply with the CAD-CUT® Online Designer. CAD-CUT® Templates make it easy to create unique designs with templated layouts and customizable fonts and clip art. – [stahls.com/templates](http://stahls.com/templates)
