

Dear Valued Customer,

Stahls' has always taken great care in maintaining the quality, consistency and color matching of our CAD-CUT® Heat Transfer materials.

COVID-19 has ravaged supply chains around the world and ours is no exception. The shortage of materials coupled with unprecedented demand for our products has created challenges.

In order to maintain supply for your business we find it necessary to manufacture UltraWeed™ with a slight modification in the process for certain colors. This change will not alter the overall look, feel, durability, CPSIA compliance or application instructions for the product. It will however create some differences in the colors offered and alter our fully Made in the USA promise.

We will note the changed colors on the website with a banner stating, “updated”. It will look like this:

This will indicate that the color you are purchasing has changed from the original offering.

We know this is not ideal but we hope that you agree that changing a color is better than being out of stock. Our other trusted CAD-CUT® Heat Transfer Materials like Premium Plus™, Thermo-FILM® and SportFilm Lite™ continue to be available without any impact.

We appreciate your loyalty and look forward to continuing to support your apparel decorating business with professional grade products.

Sincerely,
Stahls'
