**Double Down on Performance with the Hotronix® Dual Air FUSION®**

*Carmichaels, PA* – The Dual Air FUSION® heat press from Hotronix® is 50 percent more productive than a swinger-style press because it features two printing stations.

Maximize time and space with the groundbreaking A and B workstations on the Dual Air FUSION® that operate independently or in unison. The upper platen moves between the two 16" x 20" heat printing stations, so the operator can prepare one garment while the other one is being pressed.

Featuring full Threadability™ on both platens, it's easy to decorate any area on a garment. Simply rotate the garment without removing it.

Both platens are equipped with a Laser Alignment System to ensure accurate placement and alignment with every print.

*Hotronix®, a GroupeSTAHL company, designs, engineers, and manufactures a full line of the world's most innovative and technologically advanced heat press machines with the goal of exceeding customer expectations at a competitive cost. Made in the USA and engineered by experts who understand heat printing, Hotronix® heat presses are product safety certified. For more information, to locate a dealer, or make a dealer inquiry, call (800) 727-8520, or visit [Hotronix.com](http://Hotronix.com).*
